

PCA plot showing the first two principal components (PCoA 1 and PCoA 2) of the data. The x-axis is labeled "PCoA 1 (43.8%)" and the y-axis is labeled "PCoA 2 (25.2%)". The plot displays two groups of samples, identified by the legend as "jan_18" (green) and "jul_17" (purple). Each group is represented by a set of points, a convex hull (shaded area), and a centroid marked with an 'X'. The "jan_18" group is generally located in the upper right quadrant, while the "jul_17" group is generally located in the lower left quadrant. There is a significant overlap between the two groups, particularly in the central region of the plot.
